

SPEC THICK MATERIAL

For Geomembrane and Related Materials

The *Thick Material Spec Welder* is ideal for in-house fabrication of heavier materials (24 oz -100 oz) with increased production rates. The exclusive guide system with pre-heat roller system greatly increases welding speeds while maintaining a quality weld. Our guide system has increased visibility and is fully adjustable. Only available in 220 volt. Standard wedge and overlap guides available for this unit.

Unique 6-roller pressure pre-heat system applied over the length of the wedge both top and bottom for increased material preheat, resulting in faster welding speeds.

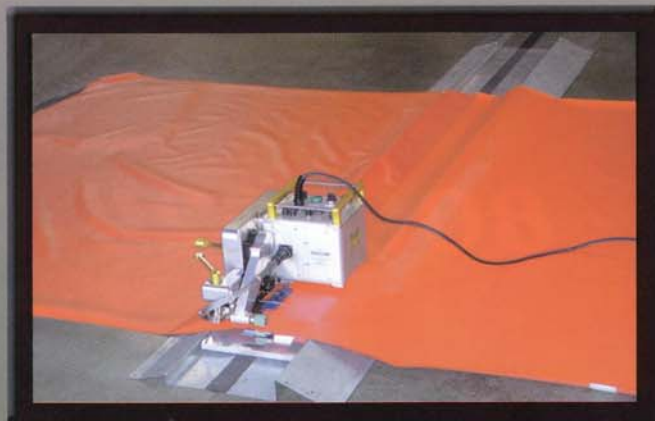

SPLIT WEDGE

TRACK SYSTEM

The Spec utilizes our exclusive *Track System* for ease of operation.

The *Track System* comes with a 5', 20-gauge galvanized steel section, track connector, hardware and magnets. The *Track System* can be portable or stationary.

#33-500: 5' Track System w/Connector
