

SPEC OVERLAP

SPEC OVERLAP

The *Spec Overlap Welders* are ideal for dedicated overlap welding of the many thermo-bonding materials available on the market today. Our new design allows for increased visibility of the welding area, variable speed and heat control, exclusive wedge swing-out feature, 6-way fully adjustable guide system for overlap welds and a full range of wedge sizes available from 3/8" (9mm) to 2" (50mm). As a 220V unit, *Thick Material* wedge and guide system can be applied.

SPEC OVERLAP ACRYLIC

The *Spec Overlap Acrylic Welder* allows for overlap welding of acrylic products as well as other non-thermoplastic materials. By using our exclusive *Thermal Bonding Tape*, the fabricator can produce flatter seams, waterproof seams and can weld standard acrylic as well as most fire-resistant acrylics.

#34-100: THERMAL BONDING TAPE
#34-200: UNISEAM FR TAPE
