

# FLAT HEM ATTACHMENT

U.S. Patent No. 6,213,184 B1

The *Flat Hem Attachment* will produce a 1" hem weld completely sealed to the inside edge. This attachment is ideal for fabricating banners, flags, awnings, tarps and covers, where a clean flat rigid edge is needed for accepting grommets or making a clean, finished edge.

## FLAT HEM

The *Triad* uses a unique front guide to pre-fold and pre-position the material for initial set up.

STATIONARY FLAT HEM WELDING  
AUSTRALIA

The material enters the *Flat Hem System* including the special outer guide and larger rollers to produce a completely welded hem edge.

The *Flat Hem Attachment* includes:

- 1" Wedge Assembly w/Heaters
- Wedge Housing
- Top Hem Guide
- Front Guide
- Outer Hem Guide
- 2 - 2" Rollers w/hardware

Once you own a *Flat Hem or Hem Cord Attachment*, you can accomplish the other weld style by simply adding an additional guide, and/or rollers. Similar parts interchange, no need to purchase another complete system.
